

(a) Comparison of selected subset over different methods at high pruning rates.

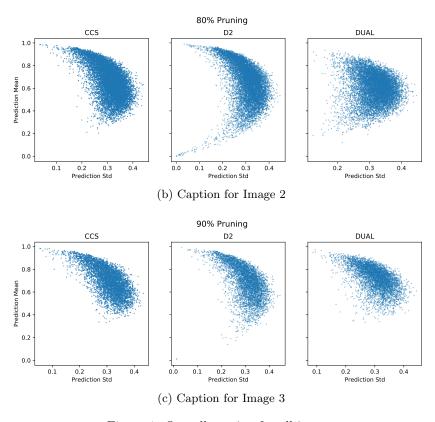

Figure 1: Overall caption for all images

Table 1: Comparison of subset overlap over different methods at high pruning rates. The subset overlap is calculated as the number of samples in the intersection divided by the total number of selected samples.

Pruning Rate	$\mathrm{CCS}/(\mathrm{DUAL}+eta)$	$\mathrm{D}2/(\mathrm{DUAL}+eta)$	$\mathrm{CCS}/\mathrm{D2}$
70%	0.41	0.37	0.42
80%	0.31	0.27	0.34
90%	0.19	0.17	0.21
